

Pedestrian Friendly pathway

The Hindu College, Guntur is promoting science and information development students spend so much time during their education in these areas. Working is the first way of displacement. Which has been reduced considerably due to motorized transportation. The communications inside college. The pedestrian is very important the college, connecting the health centre, library, canteen and the office section. The college is well designed for the parking of vehicles separately for the staff and students. This pedestrian is giving good health and healthy environment in the without disturbing the green environment.

BAN ON PLASTIC

Plastic bags and other plastic waste are a very big threat to the environment. They are mostly made of organic polymers which are nothing but long chains of carbon atoms. These polymers cannot be broken down by environmental factors easily. Years of using plastics are now showing their effects on the environment. The non-degradable plastic has been creating pollution of air, water, soil and every other component of nature. It is high time that we become aware of this menace and contribute towards banning plastic globally. Only then, we will be able to save our earth from choking to death. The problems with using plastic in human health include organ failure, intoxication and respiration & gastro intestinal distress. The burning of plastics also produces harmful smoke that can cause poisoning in humans. Another major problem with plastic is that it accumulates in waterways and clog drains and sewage. This can result in overflowing drains which can then breed various vectors of diseases. From this accumulation of plastic, oxygen supply to the water is reduced.

For all the above mentioned reasons, we must choose to ban the use of plastic bags altogether in our college premises. In this connection, our college students are instructed not to use plastic bags or plastic goods in the college. We strictly instructed the canteen authorities to use biodegradable cups for tea and coffee.

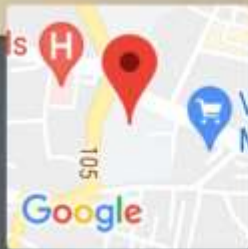

In our college premises, stickers are pasted here and there regarding “Don’t use plastic bags” etc. usually at our college canteen student gathering is more, so there also we pasted a sticker of “Don’t use plastic carry bags”. And also we placed hoardings of “harmful effects to human health by using plastic carry bags”.

Thus with the association of eco-club team we are implementing strictly the ban on plastic.

LAND SCAPING

Our Hindu College is giving more importance to Land scaping, it serves as a live Medicines and herbal taste. It can change the microclimate between 3–5° C. The land scape design will attract the public students and staff in keeping the environment clean and enhance the health and happiness, which finally helps in increasing the remembering capacity of students. In front of the college campus, before principal chamber, we are maintaining “NAKSHATRA VANAM” having 29 plants which are named as “stars”. All these plants are places scientifically and is taken proper care in its maintenance, and on the other hand the trees are planted which are eco – friendly. The eco-club team is actively participating in maintaining the Land scape, maintaining the Leafy vegetables and also on the other side Saraswativanam is maintained by green patch, this type of environment is giving healthy atmosphere.
